There is the chapter where we have discussed about how to carry out a reconnaissance. There are two types of reconnaissance; passive and active. While reading through the Hacking with Kali Linux handbook, you can learn more about the types of reconnaissance. As an attacker or penetration tester, the reconnaissance will come in handy when gathering information before you can launch an attack. The pilot study makes sure that you will gain access to some important pieces of information that will ensure that the attack can progress in a flawless manner. As a penetration tester or an attacker, you should make sure that you have assessed the situation accordingly. Also, you must make sure that you have chosen a suitable target first. When using Kali Linux, you should make sure that you have not installed external applications. Some of the tools provided by Kali Linux make sure that you can gain access to administrator passwords as well as usernames. You can then go ahead to use this information to gain access to the network or target's server.
