Writing Resistance Sarah J. Young, 2021-06-21 In 1884, the first of 68 prisoners convicted of terrorism and revolutionary activity were transferred to a new maximum security prison at Shlissel'burg Fortress near St Petersburg. The regime of indeterminate sentences in isolation caused severe mental and physical deterioration among the prisoners, over half of whom died. But the survivors fought back to reform the prison and improve the inmates' living conditions. The memoirs many survivors wrote enshrined their story in revolutionary mythology, and acted as an indictment of the Tsarist autocracy's loss of moral authority. Writing Resistance features three of these memoirs, all translated into English for the first time. They show the process of transforming the regime as a collaborative endeavour that resulted in flourishing allotments, workshops and intellectual culture – and in the inmates running many of the prison's everyday functions. Sarah J. Young's introductory essay analyses the Shlissel'burg memoirs' construction of a collective narrative of resilience, resistance and renewal. It uses distant reading techniques to explore the communal values they inscribe, their adoption of a powerful group identity, and emphasis on overcoming the physical and psychological barriers of the prison. The first extended study of Shlissel'burg's revolutionary inmates in English, Writing Resistance uncovers an episode in the history of political imprisonment that bears comparison with the inmates of Robben Island in South Africa's apartheid

regime and the Maze Prison in Belfast during the Troubles. It will be of interest to scholars and students of the Russian revolution, carceral history, penal practice and behaviours, and prison and life writing.

THE IN BETWEEN Jim Bruton, 2020-08-20 Built airplane. Flew airplane. Crashed airplane. Met God. all set. Jim Bruton knows life. His past is marked by relentless curiosity and remarkable achievement. He was an African wilderness guide, Emmy Award-winning wildlife film director, aviator, adventurer, inventor of the satellite videophone, NBC News Middle East war correspondent, a husband, and a father. His passion - building and flying WWI-era aircraft - led him where he never imagined he'd go: a horrific crash that left him for dead. For one week, Jim Bruton hovered in the place that is not life and not death, a place he came to know as the In Between. He came back, and this is his report of what he has seen. Bruton takes us along for a by turns hair-raising and ultimately triumphant story of his coming to grips with what has happened to him. As he heals, his experiences in the In Between become more and more pressing. They download into his mind like rushing movie stills. His life of action turns internal. He uses all he knows - from quantum physics and battlefield memories to scenes of childhood and familial love - for a new deeper understanding of what it means to live. Jim Bruton, the man who fell from the sky, is not the same man who flew into it. And if you walk some of his journey with him, neither are you. About the author: Jim Bruton has lived

a life many people dream of but few experience. As a little boy, he lived within an active imagination, including a love for wildlife filming, international travel, science fiction, and vintage aviation. In adulthood, he checked every one of those off his list with internationally recognized achievements, an Emmy for a National Geographic wildlife film, traveling to all seven continents, the Titanic, the North Pole, and Mt. Everest, shrinking a satellite TV truck into a backpack, and transmitting live video from places before impossible and building and flying historical reproduction aircraft from World War I and the early 1930s. For many, any one of these adventures resulted in a single lifetime achievement. For Jim, it was just the beginning, climaxing with the crash of his last aircraft and the near-death experience that followed.

Between History and Literature Lionel Gossman, 2001-05 Gossman (French, Princeton U.) illuminates the problematic relationship between history and literature, and shows how each discipline both challenges and undermines the other's absolutist pretensions. In particular, he address the essential historicity of literature and the essentially literary-textual nature of history through an inquiry into the work of the Romantic historians, especially Thierry and Michelet. Unlocking The Sky Seth Shulman,2009-10-13 *Unlocking the Sky* tells the extraordinary tale of the race to design, refine, and manufacture a manned flying machine, a race that took place in the air, on the ground, and in the courtrooms of America. While the Wright brothers threw a veil of secrecy over their flying machine, Glenn Hammond Curtiss -- perhaps the greatest aviator and aeronautical inventor of all time -- freely exchanged information with engineers in America and abroad, resulting in his famous airplane, the June Bug, which made the first ever public flight in America. Fiercely jealous, the Wright brothers took to the courts to keep Curtiss and his airplane out of the sky and off the market. Ultimately, however, it was Curtiss's innovations and designs, not the Wright brothers', that served as the model for the modern airplane.

Biennial State-of-the-Art Sensors Technology in Australia 2019-2020 Edith Chow,Rona Chandrawati,2021-04-27 Recent developments in novel materials, sensing principles and signal processing are paving the way for new types of analytical sensors, offering improved sensing performance and practicality. Such advancements will provide accurate and real-time analytical information in the environmental, food, and healthcare sectors to better guide decision-making. For sensors to be commercially viable, the miniaturisation and

integration of components for rapid, automated, in-field detection and diagnosis need to be considered. This book highlights state-of-the-art sensors technology in Australia through original contributions and reviews.

Ultrasound Imaging and Therapy Aaron Fenster,James C. Laceyfield,2015-05-08 Up-to-Date Details on Using Ultrasound Imaging to Help Diagnose Various Diseases Due to improvements in image quality and the reduced cost of advanced features, ultrasound imaging is playing a greater role in the diagnosis and image-guided intervention of a wide range of diseases. Ultrasound Imaging and Therapy highlights the latest advances in using ultrasound imaging in image-guided interventions and ultrasound-based therapy. The book presents current and emerging techniques, identifies trends

in the use of ultrasound imaging, and addresses technical and computational problems that need to be solved. The book is organized into three sections. The first section covers advances in technology, including transducers (2-D, 3-D, and 4-D), beamformers, 3-D imaging systems, and blood velocity estimation systems. The second section focuses on diagnostic applications, such as elastography, quantitative techniques for therapy monitoring and diagnostic imaging, and ultrasound tomography. The final section explains the use of ultrasound in image-guided interventions for image-guided biopsy and brain imaging.

Sonochemistry and the Acoustic Bubble Franz Grieser, Pak-Kon Choi, Naoya Enomoto, Hisashi Harada, Kenji Okitsu, Kyuichi Yasui, 2015-04-16 Sonochemistry and the Acoustic Bubble provides an introduction to the way ultrasound acts on bubbles in a liquid to cause bubbles to collapse violently, leading to localized 'hot spots' in the liquid with temperatures of 5000° celcius and under pressures of several hundred atmospheres. These extreme conditions produce events such as the emission of light, sonoluminescence, with a lifetime of less than a nanosecond, and free radicals that can initiate a host of varied chemical reactions (sonochemistry) in the liquid, all at room temperature. The physics and chemistry behind the phenomena are simply, but comprehensively presented. In addition, potential industrial and medical applications of acoustic cavitation and its chemical effects are described and reviewed. The book is suitable for graduate students working with

ultrasound, and for potential chemists and chemical engineers wanting to understand the basics of how ultrasound acts in a liquid to cause chemical and physical effects. Experimental methods on acoustic cavitation and sonochemistry Helps users understand how to readily begin experiments in the field Provides an understanding of the physics behind the phenomenon Contains examples of (possible) industrial applications in chemical engineering and environmental technologies Presents the possibilities for adopting the action of acoustic cavitation with respect to industrial applications

Nanostructures for Drug Delivery Ecaterina Andronescu, Alexandru Mihai Grumezescu, 2017-03-24 *Nanostructures for Drug Delivery* extensively covers the various nanostructured products that have been tested as carriers in target drug delivery systems. In addition, the book analyses the advantages of, and issues related to, using nanostructured materials in drug delivery systems, also detailing various nanocarrier preparation techniques. As delivering the drug to the target site is a major problem in providing effective treatment for many diseases, this book covers the latest advancements in numerous nanotechnological products that are being used in disease detection, controlled drug delivery, as biosensors, and in tissue engineering that have been developed for more efficient patient healthcare. Due to the versatility of nanostructured materials, it is now possible to deliver a drug at its target site in a more accurate and efficient way. This volume is an up-to-date, state-of-the-art work that highlights the principal mechanistic aspects

related to the delivery of active nanoscale therapeutic agents (natural or synthetic) and their release profile in different environmental media. It highlights nanoscale encapsulation strategies and discusses both organic and inorganic nanomaterials as carriers and delivery platforms. Demonstrates how nanostructures are successfully employed in drug delivery stems and as drug delivery agents, allowing biomaterials scientists and biochemists to create more effective drug delivery systems Offers an overview of recent research into the use of nanostructures in drug delivery techniques in a cogent, synthesized way, allowing readers to quickly familiarize themselves with this area Includes examples of how the application of nanostructures have improved the efficiency of drug delivery systems, showing medical scientists how they are beneficial

Oxidative Stress Silvana Andreescu,Maria Hepel,2016-08 This book provides a comprehensive overview of the oxidative stress related mechanisms in biological systems and the involvement of reactive oxygen and nitrogen species (ROS and RNS), the damage of DNA, proteins, and lipids caused by oxidative stress, the protection of cells and tissues against free radicals, the relation of the oxidative stress to aging and human diseases including

cancer and neurological disorders, and the development of new therapeutic approaches to modulate oxidative stress. The current state-of-the-art methodologies including the development of sensors and biosensors for the detection of ROS/RNS and of biomarkers of oxidative stress are also discussed. The book is organized in three overlapping parts, starting with general considerations of the oxidative stress, homeostasis pathways, and ROS mechanisms, followed by chapters discussing the involvement of ROS in particular diseases and concluding with analytical aspects of oxidative stress monitoring. The book provides a solid background on oxidative stress and ROS/RNS generation for novice learners while also offering scientists and practitioners already involved in this field a wealth of information covering the most recent developments in the study of oxidative stress, the role of radical species, novel antioxidant therapies, and methods for assessing free radicals and oxidative stress.

Cell Death, Inflammation and Oxidative Stress in Neurodegenerative Diseases Anne Vejux, 2022-01-17 Neurodegenerative diseases encompass very different pathologies, which can be demyelinating or nondemyelinating, but which have common mechanisms such as cell death, oxidative stress and inflammation. A better understanding of these mechanisms allows the search for biomarkers and targets for new therapies. This special issue brings together different data on Alzheimer's disease, Parkinson's disease, and multiple sclerosis, detailing the mechanisms of cell death (necroptosis, ferroptosis), oxidative stress and inflammation but also the possibilities of neuroprotection via 5 research articles and 6 review articles. The different reviews allow us to take stock of cell death, oxidative stress and neuroinflammation in the context of neurodegenerative diseases but also in relation to other pathologies where these processes are involved.
