State Capitalism and Working-class Radicalism in the French Aircraft Industry Herrick

Chapman,1991-01-01 Using the example of the aircraft industry, which takes him like an arrow to the heart of many of the key conflicts in French life between 1936 and 1948, Herrick Chapman has written a penetrating and exceptionally well documented account of the way that France developed her present style of industrial relations, in which the state plays such a central role. No book I know so successfully integrates the history of aviation . . . with the political and social history of France. Both thorough and thoughtful, it is an impressive achievement.-- Robert Wohl, University of California, Los Angeles An unusual, innovative book based on impressive research that throws new light in a major way on twentieth-century French politics and society . . . one of the most interesting and original monographs in modern French history in a long time.--Robert O. Paxton, Columbia University This is a breakthrough of considerable importance. [Chapman] will become the leading North American, perhaps even English-speaking, historian of contemporary France.--George Ross, Brandeis University

The Rise and Fall of the French Air Force Greg Baughen, 2018-04-17 On 10 May 1940, the French possessed one of the largest air forces in the world. On paper, it was nearly as strong as the RAF. Six weeks later, France had been defeated. For a struggling French Army desperately looking for air support, the skies seemed empty of friendly planes. In the decades that followed, the debate raged. Were there unused stockpiles of planes? Were French aircraft really so inferior? Baughen examines the myths that surround the French defeat. He explains how at the end of the First World War, the French had possessed the most effective air force in the world, only for the lessons learned to be forgotten. Instead, air policy was guided by radical theories that predicted air power alone would decide future wars. Baughen traces some of the problems back to the very earliest days of French aviation. He describes the mistakes and bad luck that dogged the French efforts to modernise their air force in the twenties and thirties. He examines how decisions made just months before the German attack further weakened the air force. Yet defeat was not inevitable. If better use had been made of

the planes that were available, the result might have been different.

My Tank Is Fight! Zack Parsons, 2006-10-01

Soldiers that fly! Tanks that fly! Cruisers that . . . sink! What Fight Have Been My Tank Is Fight! contains a humorous and exciting examination of twenty real inventions from World War II that never saw the light of day. Each entry includes full technical details, a complete development history, in-depth analysis, and a riveting

fictionalized account of the invention's success or failure on the battlefield. Lavish color artwork and technical illustrations are falling from the pages of this book like toenails from a trench foot. Dive under the Atlantic in the turreted U-Cruiser, or rule its surface from an aircraft carrier made out of ice. Shred bomber formations in a high-performance flying wing fighter and then rocket to your untimely end from the cockpit of your very own suicide missile. We've got a pair of German armored land vehicles for you that are so large they had to be powered by naval engines! *My Tank Is Fight!* delivers the thrilling action of the Second World War as it might have been with a touch of humor and a lack of class. Only the slow-witted are reading this anywhere other than in line at the cash register. Ask an adult to help you if you're still not sure you want to buy the book.

Metal Nanoparticles and Clusters Francis Leonard Deepak, 2018-09-01 □ This book covers the continually expanding field of metal nanoparticles and clusters, in particular their size-dependent properties and quantum phenomena. The approaches to the organization of atoms that form clusters and nanoparticles have been advancing rapidly in recent times. These advancements are described through a combination of experimental and computational approaches and are covered in detail by the authors. Recent highlights of the various

emerging properties and applications ranging from plasmonics to catalysis are showcased.

Hippocampal Microcircuits Vassilis Cutsuridis, Bruce P. Graham, Stuart Cobb, Imre Vida, 2018 This is the 2nd edition of a very well received and popular book that reflects the current state-of-the-art of the ongoing research avenues concerning the hippocampus and processing units bridging the gap between single cell activity, network activity and global brain function. It aims to provide a methodology to anyone interested in developing microcircuit level models of the hippocampus. The book is divided into two thematic areas: (I) Experimental background and (II) Computational analysis. In part I, leading experimental neuroscientists discuss the morphological, physiological and molecular characteristics as well as the

connectivity and synaptic properties of the various cell types found in the hippocampus. Behaviour-related ensemble activity patterns of morphologically identified neurons in anesthetized and freely moving animals provide insights on the function of the hippocampal areas. In part II, computational neuroscientists present models of the hippocampal microcircuits at various levels of detail (e.g. single cell level, network level, etc.). Synptomics and connectomics models of hippocampal structures are initially discussed. Then, network models of memory, rhythm generation and spatial navigation are presented, followed by abstract and biophysical models of synaptic plasticity. Network models of hippocampal implicated disorders (epilepsy and schizophrenia) are then detailed and how their network topologies, connectivities and activities change in these diseases. Finally, two chapters are dedicated to describing simulator environments of single neurons and networks currently used by computational neuroscientists in developing their models and modelling tools to parametrically constrain them. This engaging volume is invaluable to experimental and computational neuroscientists, electrical engineers, physicists, mathematicians and others interested in developing microcircuit models of the hippocampus. Graduate level students and trainees in all of these fields can find this book a significant source of information.

French Secret Projects 3: French & European Spaceplane Designs 1964-1994 Jean-Christophe Carbonel, 2021-10-07 In 1963, Eugen Sanger, became head of the Eurospace organization which promoted the 'AeroSpace Transporter'. In response to a Eurospace call, aircraft makers in France, Germany and UK designed recoverable, winged spacecraft. From 1964 to 1970 the French government led studies to evaluate the feasibility of the concept. Those studies, under the leadership of the French Centre National d'Etudes Spatiales (CNES), coalesced into the Hermes spaceplane which was then adopted by the European Space Agency. In parallel, Germany and UK proposed fully recoverable designs while other countries, including Japan, India and Russia came to CNES to share ideas about spaceplane design. Unfortunately Hermes was never launched and by 1994 was abandoned after many alternative propositions were discussed. This book relates the story of these remarkable concepts, crossovers between aircraft and spacecraft beginning with the 'antipodal bomber' of 1944 and continuing to Aerospatiale STS-2000 project through the Transporteur Aero-Spatial, VERAS, AW Pyramid, Bumerang, Sanger II, HOTOL, Hermes, and Taranis. Non-European projects like Dyna-Soar, Hyperplane, HOPE, and MAKS are also be covered. It provides a fascinating and

detailed account of these projects which, being half-way between aircraft and spacecraft, have hitherto often been therefore often neglected by aviation writers and historians.
