Futureproof Kevin Roose, 2021-03-09 A practical, deeply reported survival guide for the age of AI, written by the New York Times tech columnist who has introduced millions to the promise and pitfalls of artificial intelligence. "Artificial intelligence can be terrifying, but Kevin Roose provides a clear, compelling strategy for surviving the next wave of technology with our jobs—and souls—intact."—Charles Duhigg, author of *The Power of Habit* It's time to get real about AI. After decades of hype and sci-fi fantasies, AI—artificial intelligence—is leaping out of research labs and into the center of our lives. Millions of people now use tools like ChatGPT and DALL-E 2 to write essays, create art and finish coding projects. AI programs are already beating humans in fields like law, medicine and entertainment, and they're getting better every day. But AI doesn't just threaten our jobs. It shapes our entire human experience, steering our behavior and influencing our choices about which TV shows to watch, which clothes to buy, and which politicians to vote for. And while many experts argue about whether a robot apocalypse is near, one critical question has gone unanswered: In a world where AI is ascendant, how can humans survive and thrive? In *Futureproof: 9 Rules for Humans in the Age of Automation*, New York Times technology columnist Kevin Roose shares the secrets of people and organizations that have successfully navigated waves of technological change, and explains what skills are necessary to stay ahead of the curve today, with lessons like • Be surprising, social, and scarce • Resist machine drift • Leave handprints • Demote your devices • Treat AI like a chimp army Roose rejects the conventional wisdom that in order to compete with AI, we have to become more like robots ourselves—hyper-efficient, data-driven workhorses. Instead, he says, we should focus on being more human, and doing the kinds of creative, inspiring, and meaningful things even the most advanced algorithms can't do.

LEGO Gadgets Klutz, 2018-03 Build 11 machines, includes all the LEGO bricks you need. Inspires open-ended creativity to not just build the models in this book, but also to experiment with their own modifications to be faster, more accurate, or more complex.

Veteran Hollywood voice actor Neil Ross tells the amazing story of his life, and fifty-plus year career, in two exciting, highly competitive professions in his autobiography: *Vocal Recall; A Life in Radio and Voiceovers* Driving cross-country to New York at 17, Neil learns how to survive in the Big Apple on \$38.06 a week, and then lives the life of a radio gypsy: Arizona, Salt Lake City, Honolulu and Saigon, where, as a Navy Journalist, Neil reports on one of the major disasters of the Viet Nam War. Then on to San Diego, San Francisco and finally, Hollywood. Neil tells of his struggle breaking into voiceovers, one of the most competitive fields in the industry. As well as a slew of popular video games including: *Metal Gear Solid, Call of Duty, Command and Conquer, Doom 3 and Mass Effect*. Neil spins the tale of his 30-plus years in voiceovers including major motion pictures and television shows, and encounters with Robert Redford, Warren Beatty, Steven Spielberg and Jerry Seinfeld. From Cave Man to Cave Martian Manfred "Dutch" von Ehrenfried, 2019-04-05 This book explores the practicality of using the existing subsurface geology on the Moon and Mars for protection against radiation, thermal extremes, micrometeorites and dust storms rather than building surface habitats at great expense at least for those first few missions. It encourages NASA to plan a precursor mission using this concept and employ a "Short Stay" Opposition Class mission to Mars as the first mission rather than the "Long Stay" concept requiring a mission that is too long, too dangerous and too costly for man's first missions to Mars. Included in these pages is a short history on the uses of caves by early humans over great periods of time. It then describes the ongoing efforts to research caves, pits, tunnels, lava tubes, skylights and the associated technologies that pertain to potential lunar and Mars exploration and habitation. It describes evidence for existing caves and lava tubes on both the Moon and Mars. The work of noted scientists, technologists and roboticists are referenced and described. This ongoing work is more extensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars. Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes.
