**X-Planes** Manfred Griehl,2012-10-24 Renowned German aviation specialist Manfred Griehl has collected a unique and valuable selection of photographs of Luftwaffe projects that never made it into battle. They remained on the drawing board or at prototype stage either because they were deemed unsuitable or the developers simply ran out of time and the projects never went into production. Most photographs come from the development sites and testing grounds of the major manufacturers of Nazi Germany: companies such as Dornier, Junkers, Focke-Wulf and Heinkel all received funding from the government to develop bigger and faster aircraft. A huge amount of private testing went on with major organizations such as Daimler-Benz, BMW and Siemens investing huge amounts in new engine systems and other advances such as radar. This book also details the innumerable alterations that were made to existing service aircraft to equip them for new roles. There are examples of Fw190s developed for the delivery of chemical and toxic weapons, the high altitude Junkers EF 61, the early prototype WNF 342 helicopter as well as numerous examples of developmental jet fighters that could very well have been realized had it not been for the effectiveness of the Allied bombing campaign in restricting the supply of necessary materials.

**China Clipper** Robert Gandt,2010-10-01 When the China Clipper shattered aviation records on its maiden six-day flight from California to the Orient in 1935, the flying boat became an instant celebrity. This lively history by Robert Gandt traces the development of the great flying boats as both a triumph of technology and a stirring human drama. He examines the political, military, and economic forces that drove its development and explains the aeronautical advances that made the aircraft possible. To fully document the story he includes interviews with flying boat pioneers and a dynamic collection of photographs, charts, and cutaway illustrations.

**Air-Mech-Strike** BG (R) David L. Grange,BG (R) Huba Wass de Czege,LTC Richard D. Liebert USAR,Major Charles A. Jarnot,Major Al Huber,LT Mike Sparks,2002-01-01 This book outlines how to reorganize the U.S. Army into a fully 2 and 3-Dimensional maneuver capable, ground force with terrain-agile, armored fighting vehicles sized to rapidly deploy by fixed-wing and rotary-wing aircraft to the scene of world conflicts and strike at the heart of freedom,s enemies. The plan to build the Army into Air-Mech-Strike Forces, exploiting emerging information-age technologies, as well as America,s supremacy in aircraft and helicopter delivery systems---at the lowest cost to the taxpayers, is described in detail. These Army warfighting organizations, using existing and some newly purchased equipment, will shape the battlefield to America,s advantage, preserving the peace before it is lost; if not, then winning fights that must be fought quickly. The dangerous world we live in

moves by the speed of the AIR, and the 21st Century U.S. Army 2D/3D combat team will dominate this medium by Air-Mech-Strike!

Reich of the Black Sun Joseph P. Farrell, 2012-09-04 Why were the Allies worried about an atom bomb attack by the Germans in 1944? Why did the Soviets threaten to use poison gas against the Germans? Why did Hitler in 1945 insist that holding Prague could win the war for the Third Reich? Why did US General George Patton's Third Army race for the Skoda works at Pilsen in Czechoslovakia instead of Berlin? Why did the US Army not test the uranium atom bomb it dropped on Hiroshima? Why did the Luftwaffe fly a non-stop round trip mission to within twenty miles of New York City in 1944? Reich of the Black Sun takes the reader on a scientific-historical journey in order to answer these questions. Arguing that Nazi Germany actually won the race for the atom bomb in late 1944, Reich of the Black Sun then goes on to explore the even more secretive research the Nazis were conducting into the occult, alternative physics and new energy sources. The book concludes with a fresh look at the Nazi Legend of the UFO mystery by examining the Roswell Majestic-12 documents and the Kecksburg crash in the light of parallels with some of the super-secret black projects being run by the SS. Reich of the Black Sun is must-reading for the researcher interested in alternative history, science, or UFOs!

**Interpreting Archaeological Topography** David Cowley, 2013 Airborne Laser Scanning (ALS), or lidar, is an enormously important innovation for data

collection and interpretation in archaeology. The application of archaeological 3D data deriving from sources including ALS, close-range photogrammetry and terrestrial and photogrammetric scanners has grown exponentially over the last decade. Such data present numerous possibilities and challenges, from ensuring that applications remain archaeologically relevant, to developing practices that integrate the manipulation and interrogation of complex digital datasets with the skills of archaeological observation and interpretation. This volume addresses the implications of multi-scaled topographic data for contemporary archaeological practice in a rapidly developing field, drawing on examples of ongoing projects and reflections on best practice. Twenty papers from across Europe explore the implications of these digital 3D datasets for the recording and interpretation of archaeological topography, whether at the landscape, site or artifact scale. The papers illustrate the variety of ways in which we engage with archaeological topography through 3D data, from discussions of its role in landscape archaeology, to issues of context and integration, and to the methodological challenges of processing, visualization and manipulation. Critical reflection on developing practice and implications for cultural resource management and research contextualize the case studies and applications, illustrating the diverse and evolving roles played by multi-scalar topographic data in contemporary archaeology.

*Flying Boats & Seaplanes* Stéphane Nicolaou, 1998 Beginning with races that

were staged at elegant French resorts in the early part of the century, flying boats and seaplanes have played an integral part in aviation history. World War I spurred the development of these machines, and by the 1930s, flying boats and seaplanes had become pioneers in transcontinental flight. This photo-filled history recalls the role of flying boats and seaplanes in civil and military aviation history, and the enthusiasm of the engineers and pilots who are associated with their development. In addition to the golden years of hydriaviation prior to World War II, author Nicolaou examines the decline of the seaplane, and its subsequent renaissance in nations that are today considered seaplane paradises. The saga is illustrated by more than 200 rare photographs uncovered in archives around the globe.

**Germans in the Antarctic** Cornelia Lüdecke, 2021-02-08 While science was usually at the forefront of German Antarctic expeditions, research into the Southern Polar region always had a political or economic component, whether it was about resource use or securing areas of influence. Cornelia Lüdecke presents the course of the three German Antarctic expeditions from 1901-03, 1911-12 and 1938/39 with their partly dramatic turns and twists and provides insights into everyday life under extreme conditions. She also evaluates unpublished material from the archives and private estates of the expedition members. She looks at the expeditions from a scientific and political point of view and also deals with the myths associated with the Schwabenland expedition during the National Socialist era. Finally, the author describes

German south polar research after World War II, which took different paths in the German Democratic Republic and in the Federal Republic of Germany, and gives an outlook on future research. For the first time, this book presents the history of the Germans in Antarctica in a factual and informative way for the general public. With numerous pictures, some of which have never been published before.

*Aerodynamics of Road Vehicles* Wolf-Heinrich Hucho, 2013-10-22 *Aerodynamics of Road Vehicles* details the aerodynamics of passenger cars, commercial vehicles, sports cars, and race cars; their external flow field; as well as their internal flow field. The book, after giving an introduction to automobile aerodynamics and some fundamentals of fluid mechanics, covers topics such as the performance and aerodynamics of different kinds of vehicles, as well as test techniques for their aerodynamics. The book also covers other concepts related to automobiles such as cooling systems and ventilations for vehicles. The text is recommended for mechanical engineers and physicists in the automobile industry who would like to understand more about aerodynamics of motor vehicles and its importance on the field of road safety and automobile production.

Aircraft Design Ajoy Kumar Kundu, 2010-04-12 *Aircraft Design* explores fixed winged aircraft design at the conceptual phase of a project. Designing an

aircraft is a complex multifaceted process embracing many technical challenges in a multidisciplinary environment. By definition, the topic requires intelligent use of aerodynamic knowledge to configure aircraft geometry suited specifically to the customer's demands. It involves estimating aircraft weight and drag and computing the available thrust from the engine. The methodology shown here includes formal sizing of the aircraft, engine matching, and substantiating performance to comply with the customer's demands and government regulatory standards. Associated topics include safety issues, environmental issues, material choice, structural layout, understanding flight deck, avionics, and systems (for both civilian and military aircraft). Cost estimation and manufacturing considerations are also discussed. The chapters are arranged to optimize understanding of industrial approaches to aircraft design methodology. Example exercises from the author's industrial experience dealing with a typical aircraft design are included.

American Supernatural Tales S. T. Joshi, Guillermo del Toro, 2013-10-01 Part of a new six-volume series of the best in classic horror, selected by Academy Award-winning director of *The Shape of Water* Guillermo del Toro *American Supernatural Tales* is the ultimate collection of weird and frightening

American short fiction. As Stephen King will attest, the popularity of the occult in American literature has only grown since the days of Edgar Allan Poe. The book celebrates the richness of this tradition with chilling contributions from some of the nation's brightest literary lights, including Poe himself, H. P. Lovecraft, Shirley Jackson, Ray Bradbury, Nathaniel Hawthorne, and—of course—Stephen King. This volumes also includes The Yellow Sign, the most horrific story from The King in Yellow, the classic horror collection by Robert W. Chambers featured on HBO's hit TV series True Detective. By turns phantasmagoric, spectral, and demonic, this is a frighteningly good collection of stories. Filmmaker and longtime horror literature fan Guillermo del Toro serves as the curator for the Penguin Horror series, a new collection of classic tales and poems by masters of the genre. Included here are some of del Toro's favorites, from Mary Shelley's Frankenstein and Ray Russell's short story "Sardonicus," considered by Stephen King to be "perhaps the finest example of the modern Gothic ever written," to Shirley Jackson's The Haunting of Hill House and stories by Ray Bradbury, Joyce Carol Oates, Ted Klein, and Robert E. Howard. Featuring original cover art by Penguin Art Director Paul Buckley, these stunningly creepy deluxe hardcovers will be perfect additions to the shelves of horror, sci-fi, fantasy, and paranormal aficionados everywhere.

**Aircraft of the Spanish Civil War, 1936-39** Gerald Howson, 1990 -- A comprehensive encyclopedia of all the aircraft that served both the

Nationalist rebels and the Republican government-- Contains detailed information about clandestine importation of aircraft by both sides. For the first time, all the astonishingly varied types of aircraft used in the war are described in a single volume. Containing sections on Spanish aviation before the war, the civil war itself, and the opposing air forces, *Aircraft of the Spanish Civil War, 1936-39* fills the gap on the bookshelves of everyone interested in the history of military aviation.

Japanese Secret Projects Edwin M. Dyer, 2009 Surprisingly, secret Japanese planes of World War II remain an area that has been largely ignored due to scarcity of information. They do, however, have a large base of interest as unlike the majority of secret Luftwaffe programs that were resigned to the drawing board, the vast number of aircraft featured within this book actually flew or were in development. The book begins with an overview of the IJN and IJA through the early years to 1945, and their secret technical exchanges with the Luftwaffe throughout the war. It is divided into two sections dedicated to the two armed forces, with a total of 34 aircraft examined, each with its history, performance, and combat records laid out in an easy to read fashion. The book provides photographs, technical drawings, and stunning color renditions of the aircraft in combat. Notable emphasis is placed upon the supersonic kamikaze aircraft, the Amerika bomber, and the ways in which the Japanese improved on German technology, particularly the Me 262 and Komet. Secret Japanese armaments are also covered in detail, with information

uncovered on guided missiles, rockets, and cannons. A gripping read for aviation and military enthusiasts around the world!

Annotated H. P. Lovecraft Howard Phillips Lovecraft, 1997 A feast for fans of classic horror, this book contains five of H.P. Lovecraft's famous tales of the macabre, completely annotated and featuring an Introduction by S. T. Joshi, the greatest living authority on the author. Destined to become a classic, The Annotated H.P. Lovecraft also includes photographs depicting Lovecraft's life and work.
