Famous Russian Aircraft: Ilyushin Il-28 E. Gordon, Yefim Gordon, Dmitriy Komissarov, 2015 The Il-28 tactical bomber was a success in all its roles. From Torpedo-bomber, reconnaissance, trainer, and mail carrier, numerous specialized versions were also developed, including testbeds for avionics, weapons, and aircraft systems. A true fighting machine, by the mid 1950s it became the main strike aircraft of the Soviets and later saw action in various armed conflicts in the Middle East, Asia and Africa.

Aeroflot: Fly Soviet Bruno Vandermuere, 2021-09-09 The first book to tell the story of the Soviet airline, featuring previously unseen ephemera. Despite the borders of the USSR being closed to the majority of its population, Soviet citizens were among the world's most frequent flyers. Following the 1917 Revolution, Vladimir Lenin made the development of aviation a priority. Assisted by advertising campaigns by artists such as Alexander Rodchenko, Soviet society was mobilized to establish an air fleet--from the very beginning of the USSR through to its demise in 1991, Soviet aviation flew its own unique path. This book unfolds the story of Soviet air travel, from early carriers like Deruluft and Dobrolet to the enigmatic Aeroflot. Organized like an Air Force, with a vast fleet of aircraft and helicopters, Aeroflot was the world's biggest air carrier of passengers and cargo, responsible for a wider range of duties than any other airline. In an era when it was still common to smoke on board, the Aeroflot emblem appeared on cigarette packets, matchboxes and many other everyday goods. Aeroflot publicity alerted domestic passengers to new destinations or proudly presented the introduction of faster, more comfortable aircraft, while colorful advertising enticed Western travelers to use Aeroflot's international services. Aeroflot: Fly Soviet uses this ephemera to illustrate a parallel aviation universe that existed for 70 years. It pays tribute to generations of aircraft engineers, designers, pilots, ticket sellers, flight dispatchers, air traffic controllers, ground handlers and flight attendants, who jointly created this remarkable chapter of Soviet civil aviation history.

On Atlas' Shoulders Chris Gibson, 2016 In August 1945 RAF Transport Command found itself with almost 2000 C-47 Dakotas acquired under Lend-Lease that had to be returned, destroyed or paid for. This left the RAF with converted bombers such as the York and Halifax C.VIII or, in the Far East, interned Japanese aircraft including the Ki.48 Lily. Post war, Britain's aircraft industry embarked on equipping RAF with the full range of transport aircraft which could carry troops and cargo to the Far East and Australia. On Atlas' Shoulders describes how the lessons of WWII were absorbed and design studies and aircraft projects including the Beverley, Vickers' V.1000 and Type 799, the Argosy and HS.681 V/STOL transport or the Britannia, HP.111, VC10 and Belfast. On Atlas' Shoulders also explains how the RAF developed their transport force from the late Sixties to today's precision delivery of equipment to forward operating bases in Afghanistan and beyond. The Mounting Base strategy followed with proposals for long-range transports such as the HP.135, Jet Belfast and VC10 developments whilst at the opposite end of the scale, liaison and observation aircraft such as the Pioneer were soon overtaken by the helicopter, culminating in the Wessex, Puma and Chinook. Illustrated throughout with photographs, drawings and specially commissioned artwork, On Atlas' Shoulders is a unique reference to the aircraft and technologies developed for logistics support of the British armed forces since 1945.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed, 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

King of Fighters -- Nikolay Polikarpov and His Aircraft Designs Mikhail Maslov, 2021-01-19 In the century-long history of the conquest of the sky there have been a number of outstanding personalities. Among them is the name of designer Nikolay Polikarpov (1892-1944), which is inseparably associated with the best achievements of the Russian and Soviet aviation. His practical activity in the aircraft industry began upon graduation from the Petersburg Polytechnic Institute in 1916. Aged 25, Polikarpov was sent to the Russo-Baltic Wagon Factory (RBWF), where the four-engined Ilya Muromets bombers designed by Igor Sikorsky were being built at that time. Later, beginning from August 1918, he worked in Moscow at the Dux aircraft factory. For several years, he was engaged in improving products manufactured by the factory, and upgrading production aircraft to accommodate the available engines, equipment and materials. From 1922, Polikarpov focused his attention on fighter aircraft, creation of which was a priority for him during the following years. The first of them was the IL-400 monoplane, designated I-1 by the Air Force. The monoplane was followed by biplanes including the 2I-N1 (1925), the I-3 (1927), the D-2 (1928), and the I-6 (1929). It was specialization in fighter aircraft which, from then on, became his mission in life. At the peak of his career as a designer, Polikarpov was informally styled 'the King of Fighters', which was quite in line with the level of his merits and achievements. In the 1930's, the TsKB-3 (I-15) and TsKB-12 (I-16) fighters were designed under Polikarpov's supervision. These aircraft were the designer's undoubtable success. They also were the main combat fighters in service with the Red Army Air Force. For the creation of the I-15 and the I-16 fighters, Polikarpov was awarded the Order of Lenin in 1935, and the Order of the Red Star a year later. In the 1930's, Nikolay Polikarpov devised a lot of aircraft of various designs, the majority of which can be described as 'advanced' and 'innovative'. In 1940, Polikarpov was granted the degree of the Doctor of Engineering and the title of the Chief Designer of the highest category. In the same year, he was awarded the title of the Hero of Socialist Labor. A year later, he became a recipient of the Stalin Prize. The gifted Soviet engineer was destined to live only 52 years. On 30 July 1944, Nikolay Polikarpov died of a rapidly evolving oncological disease. To venerate his memory, the U-2 trainer has ever since been designated the Po-2 (Polikarpov-2). The book which is presented to the reader describes all Polikarpov's original projects, both those put into reality and unimplemented ones. It took the author many years to prepare for the creation of the book. The author studied materials on the respective topics in all Russian archives, and made use of remembrances of Polikarpov's contemporaries and publications by other researchers. For purposes of clarity and in order to facilitate publication, the author split the book on Nikolai Polikarpov's aircraft into two parts - the 'Biplane Era' and the 'Monoplane Era'. Indeed, during the designer's activity from 1918 through to 1932, he devoted himself predominantly to creating biplanes. For the 1920's, the biplanes were a preferable option; they were more common, more reliable, better studied, and even more desirable for the Red Army Air Force. The first design of the IL-400 (I-1) monoplane fighter appeared as early as 1923; however, it was through its novelty and unpredictability that the aircraft failed to achieve the deserved success. It should be noted that the U-2 (Po-2) and the R-5 biplanes, which were created during that period, became one of the best Polikarpov aircraft, and brought him recognition as a reputed designer. In the 1930's, Nikolai Polikarpov's activity reached its pinnacle. It was during that period that he created his advanced monoplanes such as the I-16, the I-17, the VIT-2, and others. He continued his fruitful and quite successful activity in the area of creating modern aircraft during the war of 1941-45 as well.

Civil Aviation and the Globalization of the Cold War Peter Svik,2020-08-10 This book focuses on the highly complex and intertwined relationship between civil aviation, technological globalization and Cold War politics. It explores how the advancement of Soviet civil aircraft engineering during the 1950s technically triggered the globalization of the Cold War. The study also shows how the processes of technological standardization facilitated transfers of technology and knowledge across the Iron Curtain and how East-West as well as East-South connections evolved. It uncovers the motives and reasons for this transfer of knowledge and expertise, and aims to identify the specific roles played by states, international organizations and interpersonal networks. By taking a global approach to this history, the book advances ongoing debates in the field. It reassesses Europe's role in the Cold War, pointing out the substantial differences in how Western Europe and the United States viewed the Communist world. This book will be of interest to scholars of international history, the history of technology and Cold War history.

Soviet Secret Projects Tony Buttler,Yefim Gordon,2005 This is the latest among Midland's very successful 'Secret Projects' series. This, the second of three volumes covering Soviet secret aviation projects, is devoted to post-World War II fighters and will include designs from famous bureaus such as Lavochkin, Mikoyan, Sukhoi, Yakovlev, Myasishchev, and Tupolev. The book covers early post-war fighters, competitions for the first-generation supersonic designs (MiG-21 and Su-7/-9), advanced designs of the 1960s which led to the MiG-2 and competitions to build the specifications which resulted in the MiG-29, Su-27, and MiG I-44. A number of previously unpublished Yakovlev designs from the late 1950s and early 1960s form a separate chapter, followed by another covering Yakovlev's VSTOL work. The book also describes the competition between design bureaus for orders and shows the progress made in aircraft design behind the Iron Curtain. It will give both experts and enthusiasts the chance to compare this work to Western aircraft programs of the era.

The History and Future of Technology Robert U. Ayres,2021 Eminent physicist and economist, Robert Ayres, examines the history of technology as a change agent in society, focusing on societal roots rather than technology as an autonomous, self-perpetuating phenomenon. With rare exceptions, technology is developed in response to societal needs that have evolutionary roots and causes. In our genus Homo, language evolved in response to a need for our ancestors to communicate, both in the moment, and to posterity. A band of hunters had no chance in competition with predators that were larger and faster without this type of organization, which eventually gave birth to writing and music. The steam engine did not leap fully formed from the brain of James Watt. It evolved from a need to pump water out of coal mines, driven by a need to burn coal instead of firewood, in turn due to deforestation. Later, the steam engine made machines and mechanization possible. Even quite simple machines increased human productivity by a factor of hundreds, if not thousands. That was the Industrial Revolution. If we count electricity and the automobile as a second industrial revolution, and the digital computer as the beginning of a third, the world is now on the cusp of a fourth revolution led by microbiology. These industrial revolutions have benefited many in the short term, but devastated the Earth's ecosystems. Can technology save the human race from the catastrophic consequences of its past success? That is the question this book will try to answer.

History of Air Cargo and Airmail from the 18th Century Camille Allaz,2005-03 It was first published in French by the Institut du Transport Aerien in 1998 and received very favourable reviews. Through the publication of the English language edition, this remarkable work is now accessible to many more readers around the world. In addition, the author has expanded the book with new sections and he has extensively updated it to bring the story of air cargo into the twenty first century, concluding with a look into the future. The author, Camille Allaz, served as Senior Vice President Cargo at Air France for 10 years which gave him an insider's close-up view of his subject, a privilege not enjoyed by many historians. There is no aspect of mail or cargo transport by air that has not been thoroughly researched and documented by Allaz, from the first brief transport of animals by balloon in France in 1783 to the vast global networks of the integrated express carriers in the 21st century. As a true scholar, he fits his narrative into the larger framework of political, military, economic and aviation history. This book should stand for years as the definitive work on the history of air cargo and airmail, and will be of immense value to the academic community, to the air cargo industry, the postal services, and to the general public.

The Adventures of a Cello Carlos Prieto,2006-10 In 1720, Antonio Stradivari crafted an exquisite work of art—a cello known as the Piatti. Over the next three centuries of its life, the Piatti cello left its birthplace of Cremona, Italy, and resided in Spain, Ireland, England, Italy, Germany, and the United States. The Piatti filled sacred spaces, such as the Santa Cueva de Cádiz, with its incomparable voice. It also spent time in more profane places, including New York City bars, where it served as a guarantee for unpaid liquor tabs. The Piatti narrowly escaped Nazi Germany in 1935 and was once even left lying in the street all night. In 1978, the Piatti became the musical soul mate of world-renowned cellist Carlos Prieto, with whom it has given concerts around the world. In this delightful book, Mr. Prieto recounts the adventurous life of his beloved Cello Prieto, tracing its history through each of its previous owners from Stradivari in 1720 to himself. He then describes his noteworthy experiences of playing the Piatti cello, with which he has premiered some eighty compositions. In this part of their mutual story, Prieto gives a concise summary of his own remarkable career and his relationships with many illustrious personalities, including Igor Stravinsky, Dmitry Shostakovich, Pablo Casals, Mstislav Rostropovich, Yo-Yo Ma, and Gabriel García Márquez. To make the story of his cello complete, Mr. Prieto also provides a brief history of violin making and a succinct review of cello music from Stradivari to the present. He highlights the work of composers from Latin America, Spain, and Portugal, for whose music he has long been an advocate and principal performer. Thus,The Adventures of a Cellooffers not only the first biography of a musical instrument but also an inviting overview of cello music and its preeminent composers and performers.

Speedbird Robin Higham,2013-05-30 Between 1939 and 1946 BOAC (the British Overseas Airways Corporation) was the nationalised airline of

Great Britain - and between 1946 and 1974 as such it exclusively operated all long-haul British flights. With its iconic 'Speedbird' logo and its central role in the glamorous 'jet age' of the 1950s and 1960s, BOAC achieved a near cult-status with admirers around the globe. Yet, to date there has been no comprehensive history of the organisation, covering its structure, fleet and the role it played in the critical events of the age - from World War II to the end of empire, a period when BOAC played a pivotal part in projecting British political power, even as that power was waning. During World War II, BOAC operated a limited wartime service and prepared for the return of commercial flight in the postwar era. But it was in the service of Britain's colonies - and latterly the process of decolonisation - that BOAC achieved its most pivotal role. The development of flight technology enabled much faster connections between Britain and her imperial possessions - as the colonies prepared for independence BOAC ferried diplomats, politicians and colonial administrators between London and the far-flung corners of Africa and Asia in much faster times than had previously been possible. In this book, acclaimed historian Robin Higham presents a unique comprehensive study of BOAC from the early jet travel of the de Havilland Comet and the Vickers VC10 to the dawn of supersonic passenger aviation. Highly illustrated and meticulously researched using previously unseen sources, this book will be essential reading for all aviation enthusiasts and anyone interested in the history of modern Britain.

Adventures of a Cello Carlos Prieto, 2018-03 A delightful biography of a celebrated Stradivarius cello and an inviting overview of cello music and its preeminent composers and performers by world-famous concert cellist Carlos Prieto.
