The Prefabricated Home Colin Davies,2005-06-15 From sash windows and ceramic tiles to barracks and warehouses, industrialized building has thrived since the nineteenth century in Europe and America. Yet architects have neglected this area of practical construction in favor of historical, theoretical, and artistic analyses, resulting in the emergence of an influential building industry with architects on the far margins. Colin Davies explores in The Prefabricated Home how the relationship between architecture and industrialized building has now become an urgent issue for architects. The Prefabricated Home outlines the methods and motives of prefabricated buildings and assesses their architectural implications. Davies traces the origins of the branded building phenomenon with examples ranging from the Dymaxion bathroom to IKEA's Bo Klok house. He also analyzes the use of industrialized buildings worldwide—including McDonald's drive-through restaurants and contrasts the aesthetic concerns of architects against the economic ones of industrialized building manufacturers. Ultimately, The Prefabricated Home proposes a partnership of architects and industrialized building that could potentially produce an exciting new type of humane and eco-conscious architecture.

ZlatanovaConsidering sustainable development of cities implies investigating cities in a holistic way taking into account many interrelations between various urban or environmental issues. 3D city models are increasingly used in different cities and countries for an intended wide range of applications beyond mere visualization. Could these 3D City models be used to integrate urban and environmental knowledge? How could they be improved to fulfill such role? We believe that enriching the semantics of current 3D city models, would extend their functionality and usability; therefore, they could serve as integration platforms of the knowledge related to urban and environmental issues allowing a huge and significant improvement of city sustainable management and development. But which elements need to be added to 3D city models? What are the most efficient ways to realize such improvement / enrichment? How to evaluate the usability of these improved 3D city models?These were the questions tackled by the COST Action TU0801 Semantic enrichment of 3D city models for sustainable urban development. This book gathers various materials developed all along the four year of the Action and the significant breakthroughs
