**Modelling the F/A-18 Hornet** Geoff Coughlin,2005-03-20 The McDonnell Douglas F/A-18 Hornet is probably the world's most advanced air superiority fighter/attack aircraft and is often seen thrilling air-show crowds around the world. It is currently in service with the US Navy, the US Marine Corps, the Spanish, Australian, Swiss and Canadian air forces. This title provides a detailed guide to modelling the Hornet in 1/48th and 1/32nd scales, covering a variety of colour schemes. The step-by-step modelling projects include a 'Gunslingers' F/A-18C USN Hornet from Operation DESERT FOX, an F/A-18D Hornet from the Royal Malaysian Air Force, a Navy 'Black Aces' F/A-18F Super Hornet and an F/A-18A 'Top Gun'-school Hornet.

**Boeing (McDonnell Douglas) F/A-18 A/B/C/D Hornets** Salvador Mafe Huertas,2021-08-31 The F/A-18 Hornet is a single- and two-seat, twin engine, multi-mission fighter/attack aircraft that can operate from either aircraft carriers or land bases. The F/A-18 fills a variety of roles: air superiority, fighter escort, suppression of enemy air defenses, reconnaissance, forward air control, close and deep air support, and day and night strike missions. The F/A-18 Hornet replaced the F-4 Phantom II fighter and A-7 Corsair II light attack jet, and also replaced the A-6 Intruder as these aircraft were retired during the 1990s.

*Boeing (McDonnell Douglas) F/A-18 E/F Super Hornets Vol. II* Salvador Mafé Huertas,2022-01-31 The FACA program (Future Fighter and Attack Aircraft) was once the largest investment in armaments made in Spain. When choosing the F-18 of McDonnell Douglas (today Boeing), the Air Force has had since 1986 - for the first time in its history - one of the most advanced fighter planes ever designed, with very wide possibilities for adapting new systems throughout its operational life, as evidenced by the Retrofit made in the early 1990s and the current MLU. The FACA program (which ultimately remained in 72 aircraft), followed by the CX program (for 24 aircraft), was the most important challenge faced by the Spanish Air Force since its creation. The professionalism demonstrated by the commission in charge of flight and technical evaluations won the admiration of the countries involved in the program. The F-18 Hornet has proven to be the ideal aircraft for air forces in countries with large territorial areas and wide coastlines or extreme weather conditions.

*McDonnell Douglas F/A-18 Hornet and Super Hornet* Steve Davies,2017-03-01 The US-designed and built McDonnell Douglas F/A-18 Hornet is one of the most important Fourth Generation fighters in the world. Its twin-engine, twin-tails (canted outwards), and leading edge root extensions make it one of the most recognizable fighters in operation. The latest version is the enlarged Super Hornet. It was controversial in being chosen as the replacement for the much loved F-14 Tomcat, but the truth is that it is a potent and fearsome fighter that boasts one of the most capable radars in service and a weapons loadout that takes full advantage of it. The Super Hornet currently performs the bulk of the Western world's airstrikes on the nefarious terrorist group 'ISIS' in Iraq and Syria. Developed initially by Northrop as the P-530 Cobra in response to the US Air Force's Light Weight Fighter competition (winner: the General Dynamics F-16), the Hornet had a troubled start in life. Designated the YF-17 for the LWF fly-off in 1974, it failed to impress the Air Force. However, contractor McDonnell Douglas stepped in confident that it could be improved sufficiently to make it a contender for the US Navy's new fighter competition. McAir, as was often the case, were right. Re-designed and re-designated the F/A-18 (fighter/attack), it won the competition and entered service with the US Navy as a carrier-borne, multi-role fighter, marking the beginning of the Hornet's journey from Air Force 'reject' to 'king' of the US Navy's Fleet Defenders

Troubled Partnership Mark Lorell,2020-03-09 During World War II. Japanese fighters, such as the famed Zero, were among the most respected and feared combat aircraft in the world. But for decades following the defeat of Japan in 1945, a variety of political and economic factors prevented Japan from developing its own modern national fighter. This changed in the 1980s. Japan began independently developing its first world-class fighter since World War II. After several years of contentious negotiations, the Japanese agreed to work with the United States to cooperatively develop a minimally modified F-16, the FS-X. The new fighter, however, has evolved into a world-class aircraft developed largely by Japanese Industry primarily due to errors committed by the U.S. side. By the fall of 1995, fifty years after the end of World War II, the Zero for the 1990s will have made its first flight, catapulting Japan into the elite ranks of nations capable of developing the most advanced weapon systems. In *Troubled Partnership*, Mark Lorell traces the evolution of the FS-X, disclosing the conflicting economic and security objectives advanced by U.S. officials, the flawed U.S. policy of technology reciprocity, and the challenges of International collaboration. Its deep Intimacy with the Interplay of policy and economy will make this volume of Intense Interest to political Scientists, military studies specialists, historians, and government officials.

**The Boeing F/a-18E/F Super Hornet and EA-18G Growler** Brad Elward,2012 The story of how the Super Hornet and Growler came into existence is the focus of this new book. The F/A-18E/F has its roots in the late-1980s Hornet 2000 study, which itself evaluated ways to enhance the range, payload, and bring-back capability of the existing F/A-18 Hornet. Through a series of trade-offs imposed by largely limited defense funds, what emerged was a versatile, affordable strike fighter aircraft that has served the Navy well since its fleet introduction in 2002. The Growler has a similar history. Itself an offshoot of the Super Hornet program, the EA-18G brought many of the Super Hornet's attributes - speed, maneuverability, self-defense capability, and advanced systems - into the electronic attack community and is now posed to assume all such missions from the venerable EA-6B Prowler within the next few years. The book draws on interviews with many of the key players in the F/A-18E/F and EA-18G program and on many press reports of the day to tell the story of how these aircraft were designed, developed, and deployed. Moreover, the book provides insights into the problems faced by these key individuals as well as the management methods they used to produce aircraft that have consistently been delivered at or ahead of schedule, under cost, and under weight.

McDonnell Douglas F-4 Phantom II Andy Evans,2008-02 The McDonnell Douglas F-4 Phantom II is a tandem two-seat, twin-engined, all-weather, long-range supersonic jet interceptor fighter/fighter-bomber. Part two of this title provides detailed photographic coverage of the US Navy and US Marine Corps variants.

**Flying Wings & Radical Things** Anthony Chong,Tony Chong,2016 Here for the first time is the untold story of Northrop's rare, unique, and formerly super-secret aircraft and spacecraft of the future. Featuring stunning original factory artwork, technical drawings, and never-before-seen photographs, this book shows an amazing array of radical aircraft concepts from Jack Northrop and his team.

*The Cutting Edge* Mark A. Lorell,Hugh P. Levaux,1998 The proposition that innovation is critical in the cost-effective design and development of successful military aircraft is still subject to some debate. RAND research indicates that innovation is promoted by intense competition among three or more industry competitors. Given the critical policy importance of this issue in the current environment of drastic consolidation of the aerospace defense industry, the authors here examine

the history of the major prime contractors in developing jet fighters since World War II. They make use of an extensive RAND database that includes nearly all jet fighters, fighter-attack aircraft, and bombers developed and flown by U.S. industry since 1945, as well as all related prototypes, modifications, upgrades, etc. The report concludes that (1) experience matters, because of the tendency to specialize and thus to develop system-specific expertise; (2) yet the most dramatic innovations and breakthroughs came from secondary or marginal players trying to compete with the industry leaders; and (3) dedicated military R&D conducted or directly funded by the U.S. government has been critical in the development of new higher-performance fighters and bombers.
