RCAdvisor's Model Airplane Design Made Easy Carlos Reyes, 2009 Build and fly your very own model airplane design. Using clear explanations, you will learn about important design trade-offs and how to choose among them. The latest research and techniques are discussed using easy to understand language. You will discover: The special challenges faced by the smaller models and how to overcome them. How to choose the right material for each part of the airplane. Easy rules for selecting the right power system, gas or electric. When it makes sense to use one of the innovative Kfm airfoils. Pros and cons of canard and multi-wing configurations. A step-by-step design process that includes goal setting and flight testing. In-depth discussions of important topics like airfoils and wing design. The sources of air drag and how to minimize their impact. ADVANCE PRAISE This book is a joy to read! The writing style and wit add dimension in a way that is rarely found in today's reference materials. If someone has considered designing their own airplane and been put off because of complicated formulas, vocabulary and reference style that would bore even an engineer, this will convince them to go ahead and try it. Written with real people in mind and not engineers - and I mean that in a good way. This is a book that will reside along the other favorites on my bookshelf. Carlos really managed to produce a book that will last a long time and become one of the standards for modelers. - Greg Gimlick, Electrics columnist, Model Aviation magazine

RCAdvisor's Model Airplane Design Made Easy is the ultimate model airplane design book for both beginning and experienced modelers. - Richard Kline, Inventor, Kfm airfoils

RCAdvisor's Model Airplane Design Made Easy is a real contribution to the world's literature on the subject. It provides an excellent bridge between full scale aviation and aeromodeling, showing the relationship between the two, for better understanding of the differences and similarities which should be applied for good model performance. While thorough in detail, the book is also easily readable so that the information is simple to understand. It is a very good combination of theory and practical application. Nicely illustrated, the book is also full of common sense explanations and references to other sources of information. - John Worth, former President and Executive Director of the AMA

Carlos Reyes personally leads the reader through some basic aerodynamics, materials considerations, electric power system planning and a practical application of theory as it is applied to a finished flying model. The background history of various types of aircraft shows the development of aviation and how it relates to the models that we build and fly today, as well as how models have influenced general aviation. It is always exciting to find some 'new to me' concepts and theories, and there were several in this well-written narrative. - Ken Myers, Editor,

Ampeer electric flight newsletter No matter how long you've been aeromodelling, or what your interests are in our great hobby, the greatest thrill of all is standing behind a unique model that you've designed and built yourself, from a blank sheet of paper - or even a blank CAD file - and preparing to make that first take off. So sit yourself down in a comfy chair, read RCadvisor's Model Airplane Design Made Easy and set off on aeromodelling's greatest adventure. Let Carlos Reyes - an aeromodeller of long standing and great talent - take you through the mysteries of how to arrive at the point that every lover of model aircraft should experience. - Dereck Woodward, aeromodeller, designer and magazine writer for the past fifty years

QF32 Richard de Crespigny, 2012-08-01 QF32 is the award winning bestseller from Richard de Crespigny, author of the forthcoming *Fly!: Life Lessons from the Cockpit of QF32* On 4 November 2010, a flight from Singapore to Sydney came within a knife edge of being one of the world's worst air disasters. Shortly after leaving Changi Airport, an explosion shattered Engine 2 of Qantas flight QF32 - an Airbus A380, the largest and most advanced passenger plane ever built. Hundreds of pieces of shrapnel ripped through the wing and fuselage, creating chaos as vital flight systems and back-ups were destroyed or degraded. In other hands, the plane might have been lost with all 469 people on board, but a supremely experienced flight crew, led by Captain Richard de Crespigny, managed to land the crippled aircraft and safely disembark the passengers after hours of nerve-racking effort.

Tracing Richard's life and career up until that fateful flight, QF32 shows exactly what goes into the making of a top-level airline pilot, and the extraordinary skills and training needed to keep us safe in the air. Fascinating in its detail and vividly compelling in its narrative, QF32 is the riveting, blow-by-blow story of just what happens when things go badly wrong in the air, told by the captain himself. Winner of ABIA Awards for Best General Non-fiction Book of the Year 2013 and Indie Awards' Best Non-fiction 2012 Shortlisted ABIA Awards' Book of the Year 2013

Ask the Pilot Patrick Smith,2004 Though we routinely take to the air, for many of us flying remains a mystery. Few of us understand the how and why of jetting from New York to London in six hours. How does a plane stay in the air? Can turbulence bring it down? What is windshear? How good are the security checks? Patrick Smith, an airline pilot and author of Salon.com's popular column, Ask the Pilot, unravels the secrets and tells you all there is to know about the strange and fascinating world of commercial flight. He offers: A nuts and bolts explanation of how planes fly Insights into safety and security Straight talk about turbulence, air traffic control, windshear, and crashes The history, color, and controversy of the world's airlines The awe and oddity of being a pilot The poetry and drama of airplanes, airports, and traveling abroad In a series of frank, often funny explanations and essays, Smith speaks eloquently to our fears and curiosities, incorporating anecdotes, memoir, and a life's passion for flight. He tackles our toughest concerns, debunks conspiracy theories and myths, and in a rarely heard voice dares to return a dash of romance and glamour to air travel.

Convair XFY-1 Pogo Skeets Coleman, Steve Ginter, B. J. Long, 1994 In 1947, both the U.S. Air Force and the U.S. Navy sponsored VTOL design studies called project Hummingbird. The rapid development of increasingly powerful powerplants had reached the point where a true VTOL aircraft was in the realm of possibility. The U.S. Navy's firsthand experiences with Japan's Kamikaze taught them the vulnerability of their great mobile peacekeepers, the carrier. Because of this experience the Navy felt that the only way to protect any naval presence in enemy waters was to equip all ships with a VTOL fighter.

Flying in the Face of Criminalization Captain Andreas Mateou, Dr Sofia Michaelides-Mateou, 2012-10-01 Two parallel investigations take place after every aviation accident: one technical, one judicial. The former must be conducted with the sole intention of making safety recommendations to prevent the recurrence of similar accidents. The judicial investigation, however, has the intention of identifying those parties that have been at fault and to apportion blameworthiness for criminal and civil liability. Consequently, this results in a predicament for those parties that have been identified as having played a role in the accident, a dilemma between not supplying information aimed at enhancing

safety and preventing future accidents and, on the other hand, supplying such information which may possibly be used against them in subsequent criminal prosecution. The situation is compounded by inconsistent approaches between different legal systems; aviation professionals may find themselves faced with criminal charges in one country but not in another, and they may also be unsure as to whether statements given during the technical investigation could be used against them in a court of law. Aviation safety is, to a large extent, built upon the trust placed by pilots, ATCOs and other aviation professionals in the process of accident investigation. This book examines the growing trend to criminalize these same people following an accident investigation and considers the implications this has for aviation safety.

Airbus A380 Guy Norris, Mark Wagner, 2005 A revealing, behind-the-scenes look at the development of the biggest commercial aircraft ever built. Understanding Air France 447 Bill Palmer, 2013-07-25 The most comprehensive coverage to date of Air France 447, an Airbus A330 that crashed in the ocean north of Brazil on June 1, 2009, killing all 228 persons on board. Written by A330 Captain, Bill Palmer, this book opens to understanding the actions of the crew, how they failed to understand and control the problem, and how the airplane works and the part it played. All in easy to understand terms. Addressed are the many contributing aspects of weather, human factors, and airplane system operation and design that the crew could not recover from. How each contributed is covered in detail along with what has been done, and needs to be done in the future to prevent this from happening again. Flying Richard Bach, 2003-10-29 Here for the first time in a single volume are three of Richard Bach's most compelling works about flight. From his edgy days as a USAF Alert pilot above Europe in an armed F84-F Thunderstreak during the Cold War to a meander across America in a 1929 biplane, Bach explores the extreme edges of the air, his airplane, and himself in glorious writing about how it feels to climb into a machine, leave the earth, and fly. Only a handful of writers have translated their experiences in the cockpit into books that have mesmerized generations.

My Years with the IAF Pratap Chandra Lal, 1986 This is the first time that an Air Chief is sharing

his thoughts and memories with the reading public. His span of service covers a period of thirty-three years: from the end of 1939 to the beginning of 1973. It includes the Burma campaign of World War II, the restricted fighting in Kashmir in 1947 and 1948, the Chinese debacle in 1962 and the two full scale wars with Pakistan in 1965 and 1971. He had 4,274 hrs of flying with the Air Force to his credit and the experience of flying 58 types of aircraft from Wapitis to supersonic jets. In 1965 he was the Vice Chief of Air Staff and in 1971 the Chief. His honesty and forthrightness many readers will find engaging& but perhaps a few who were on the scene then may find them unpalatable. In a way this is the story of aviation in India, in particular of the Indian Air Force. It is a story of a real life adventure the genesis, growth and achievements of the youngest of the three defence services. Sir Winstom Churchill said of the RAF: Never before in the history of human conflict was so much owed by so many to so few. That is true also of the Indian Air Force. Though this does not purport to be a history of the Indian Air Force without it no history would be complete.

Skyfaring Mark Vanhoenacker,2015-04-02 ****Sunday Times Bestseller**** ****Book of the Week on Radio 4**** 'A beautiful book about a part of the modern world which remains genuinely magical' Mark Haddon 'One of the most constantly fascinating, but consistently under-appreciated aspects of modern life is the business of flying. Mark Vanhoenacker has written the ideal book on the subject: a description of what it's like to fly by a commercial pilot who is also a master prose stylist and a deeply sensitive human being. This is a man who is at once a technical expert – he flies 747s across continents – and a poet of the skies. This couldn't be more highly recommended.' Alain de Botton Think back to when you first flew. When you first left the Earth, and travelled high and fast above its

turning arc. When you looked down on a new world, captured simply and perfectly through a window fringed with ice. When you descended towards a city, and arrived from the sky as effortlessly as daybreak. In Skyfaring, airline pilot and flight romantic Mark Vanhoenacker shares his irrepressible love of flying, on a journey from day to night, from new ways of mapmaking and the poetry of physics to the names of winds and the nature of clouds. Here, anew, is the simple wonder that remains at the heart of an experience which modern travellers, armchair and otherwise, all too easily take for granted: the transcendent joy of motion, and the remarkable new perspectives that height and distance bestow on everything we love. ‘A beautiful, contemplative book... What Skyfaring gives is something we need: elevation; another perspective... Normally when I find a volume where prose style and subject matter fuse so pleasingly, I tear through it in a day. Here, I found myself pausing on almost every page, as I absorbed its detail or phrasing.’ Nicholas Lezard, Guardian **A 2015 Book of the Year – The Economist, The New York Times, GQ and more**
