The Distributional Implications of the Impact of Fuel Price Increases on Inflation Mr. Kangni R Kpodar, Boya Liu, 2021-11-12 This paper investigates the response of consumer price inflation to changes in domestic fuel prices, looking at the different categories of the overall consumer price index (CPI). We then combine household survey data with the CPI components to construct a CPI index for the poorest and richest income quintiles with the view to assess the distributional impact of the pass-through. To undertake this analysis, the paper provides an update to the Global Monthly Retail Fuel Price Database, expanding the product coverage to premium and regular fuels, the time dimension to December 2020, and the sample to 190 countries. Three key findings stand out. First, the response of inflation to gasoline price shocks is smaller, but more persistent and broad-based in developing economies than in advanced economies. Second, we show that past studies using crude oil prices instead of retail fuel prices to estimate the pass-through to inflation significantly underestimate it. Third, while the purchasing power of all households declines as fuel prices increase, the distributional impact is progressive. But the progressivity phases out within 6 months after the shock in advanced economies, whereas it persists beyond a year in developing countries.

How Much Carbon Pricing is in Countries' Own Interests? The Critical Role of Co-Benefits Ian W.H. Parry, Mr. Chandara Veung, Mr. Dirk Heine, 2014-09-17 This paper calculates, for the top twenty emitting countries, how much pricing of carbon dioxide (CO₂) emissions is in their own national interests due to domestic co-benefits (leaving aside the global climate benefits). On average, nationally efficient prices are substantial, \$57.5 per ton of CO₂ (for year 2010), reflecting primarily health co-benefits from reduced air pollution at coal plants and, in some cases, reductions in automobile externalities (net of fuel taxes/subsidies). Pricing co-benefits reduces CO₂ emissions from the top twenty emitters by 13.5 percent (a 10.8 percent reduction in global emissions). However, co-benefits vary dramatically across countries (e.g., with population exposure to pollution) and differentiated pricing of CO₂ emissions therefore yields higher net benefits (by 23 percent) than uniform pricing. Importantly, the efficiency case for pricing carbon's co-benefits hinges critically on (i) weak prospects for internalizing other externalities through other pricing instruments and (ii) productive use of carbon pricing revenues.

Stirling Engine Design Manual William Martini, 2013-01-25 For Stirling engines to enjoy widespread application and acceptance, not only must the fundamental operation of such engines be widely understood, but the requisite analytic tools for the stimulation, design, evaluation and optimization of Stirling engine hardware must be readily available. The purpose of this design manual is to provide an introduction to Stirling cycle heat engines, to organize and identify the available Stirling engine literature, and to identify, organize, evaluate and, in so far as possible, compare non-proprietary Stirling engine design methodologies. This report was originally prepared for the National Aeronautics and Space Administration and the U. S. Department of Energy.

Air Pollution from Motor Vehicles Asif Faiz, Christopher S. Weaver, Michael P. Walsh, 1996-01-01 Contributions by Surhid Gautam and Lit-Mian Chan. This book presents a state-of-the-art review of vehicle emission standards and regulations and provides a synthesis of worldwide experience with vehicle emission control technologies and their applications in both industrial and developing countries. Topics covered include: * The two principal international systems of vehicle emission standards: those of North America and Europe * Test procedures used to verify compliance with emissions standards and to estimate actual emissions * Engine and aftertreatment technologies that have been developed to enable new vehicles to comply with emission standards, as well as the cost and other impacts of these technologies * An evaluation of measures for controlling emissions from in-use vehicles * The role of fuels in reducing vehicle emissions, the benefits that could be gained by reformulating conventional gasoline and diesel fuels, the potential benefits of alternative cleaner fuels, and the prospects for using hydrogen and electric power to run motor vehicles with ultra-low or zero emissions. This book is the first in a series of publications on vehicle-related pollution and control measures prepared by the World Bank in collaboration with the United Nations Environment Programme to underpin the Bank's overall objective of promoting transport that is environmentally sustainable and least damaging to human health and welfare.

Russia in Decline S. Enders Wimbush, Elizabeth M. Portale, 2017-03 Russia is in precipitous decline, which is unlikely to be reversed. This conclusion, based on the research of Russian and American experts, constitutes the bottom line of The Jamestown Foundation's project, *Russia in Decline*. Moreover, the tempo of Russia's decay is accelerating across virtually every fragment of its politics, economy, society and military, which renders Russia a poor candidate to survive globalization, let alone claim the mantle of a Great Power. This small volume details why Russia's spiraling into decline and disarray should keep strategists awake at night. It should also alert foreign policy, security and military planners, for whom Russia's decline will necessarily become the leitmotif of informed planning.

Seeing Like a State James C. Scott, 2020-03-17 "One of the most profound and illuminating studies of this century to have been published in recent decades."—John Gray, *New York Times* Book Review Hailed as "a magisterial critique of top-down social planning" by the *New York Times*, this essential work analyzes disasters from Russia to Tanzania to uncover why states so often fail—sometimes catastrophically—in grand efforts to engineer their society or their environment, and uncovers the conditions common to all such planning disasters. "Beautifully written, this book calls into sharp relief the nature of the world we now inhabit."—*New Yorker* "A tour de force."—Charles Tilly, Columbia University

Bringing Order to Chaos Peter J Schifferle Editor, Peter Schifferle, 2018-10-12 Volume 2, *Bringing Order to Chaos: Combined Arms Maneuver in Large Scale Combat Operations*, opens a dialogue with the Army. Are we ready for the significantly increased casualties inherent to intensive combat between large formations, the constant paralyzing stress of continual contact with a peer enemy, and the difficult nature of command and control while attempting division and corps combined arms maneuver to destroy that enemy? The chapters in this volume answer these questions for combat operations while spanning military history from 1917 through 2003. These accounts tell the challenges of intense combat, the drain of heavy casualties, the difficulty of commanding and controlling huge formations in contact, the effective use of direct and indirect fires, the need for high quality leadership, thoughtful application of sound doctrine, and logistical sustainment up to the task. No large scale combat engagement, battle, or campaign of the last one hundred years has been successful without being better than the enemy in these critical capabilities. What can we learn

from the past to help us make the transition to ready to fight tonight?

Decarbonizing Development Marianne Fay, Stephane Hallegatte, Adrien Vogt-Schilb, Julie Rozenberg, Ulf Narloch, Tom Kerr, 2015-06-09 The science is unequivocal: stabilizing climate change implies bringing net carbon emissions to zero. This must be done by 2100 if we are to keep climate change anywhere near the 2°C warming that world leaders have set as the maximum acceptable limit. *Decarbonizing Development: Three Steps to a Zero-Carbon Future* looks at what it would take to decarbonize the world economy by 2100 in a way that is compatible with countries' broader development goals. Here is what needs to be done: -Act early with an eye on the end-goal. To best achieve a given reduction in emissions in 2030 depends on whether this is the final target or a step towards zero net emissions. -Go beyond prices with a policy package that triggers changes in investment patterns, technologies and behaviors. Carbon pricing is necessary for an efficient transition toward decarbonization. It is an efficient way to raise revenue, which can be used to support poverty reduction or reduce other taxes. Policymakers need to adopt measures that trigger the required changes in investment patterns, behaviors, and technologies - and if carbon pricing is temporarily impossible, use these measures as a substitute. -Mind the political economy and smooth the transition for those who stand to be most affected. Reforms live or die based on the political economy. A climate policy package must be attractive to a majority of voters and avoid impacts that appear unfair or are concentrated on a region, sector or community. Reforms have to smooth the transition for those who stand to be affected, by protecting vulnerable people but also sometimes compensating powerful lobbies.

Law Enforcement Intelligence David L. Carter, Ph D David L Carter, U.s. Department of Justice, Office of Community Oriented Policing Services, 2012-06-19 This intelligence guide was prepared in response to requests from law enforcement executives for guidance in intelligence functions in a post-September 11 world. It will help law enforcement agencies develop or enhance their intelligence capacity and enable them to fight terrorism and other crimes while preserving community policing relationships. The world of law enforcement intelligence has changed dramatically since September 11, 2001. State, local, and tribal law enforcement agencies have been tasked with a variety of new responsibilities; intelligence is just one. In addition, the intelligence discipline has evolved significantly in recent years. As these various trends have merged, increasing numbers of American law enforcement agencies have begun to explore, and sometimes embrace, the intelligence function. This guide is intended to help them in this process. The guide is directed primarily toward state, local, and tribal law enforcement agencies of all sizes that need to develop or reinvigorate their intelligence function. Rather than being a manual to teach a person how to be an intelligence analyst, it is directed toward that manager, supervisor, or officer who is assigned to create an intelligence function. It is intended to provide ideas, definitions, concepts, policies, and resources. It is a primera place to start on a new managerial journey. Every law enforcement agency in the United States, regardless of agency size, must have the capacity to understand the implications of information collection, analysis, and intelligence sharing. Each agency must have an organized mechanism to receive and manage intelligence as well as a mechanism to report and share critical information with other law enforcement agencies. In addition, it is essential that law enforcement agencies develop lines of communication and information-sharing protocols with the private sector, particularly those related to the critical infrastructure, as well as with those private entities that are potential targets of terrorists and criminal enterprises. Not every agency has the staff or resources to create a formal intelligence unit, nor is it necessary in smaller agencies. This document will provide common language and processes to develop and employ an intelligence capacity in SLTLE agencies across the United States as well as articulate a uniform understanding of concepts, issues, and terminology for law enforcement intelligence (LEI). While terrorism issues are currently most pervasive in the current discussion of LEI, the principles of intelligence discussed in this document apply beyond terrorism and include organized crime and entrepreneurial crime of all forms. Drug trafficking and the associated crime of money laundering, for example, continue to be a significant challenge for law enforcement. Transnational computer crime, particularly Internet fraud, identity theft cartels, and global black marketeering of stolen and counterfeit goods, are entrepreneurial crime problems that are increasingly being relegated to SLTLE agencies to investigate simply because of the volume of criminal incidents. Similarly, local law enforcement is being increasingly drawn into human trafficking and illegal immigration enterprises and the often associated crimes related to counterfeiting of official documents, such as passports, visas, driver's licenses, Social Security cards, and credit cards. All require an intelligence capacity for SLTLE, as does the continuation of historical organized crime activities such as auto theft, cargo theft, and virtually any other scheme that can produce profit for an organized criminal entity. To be effective, the law enforcement community must interpret intelligence-related language in a consistent manner. In addition, common standards, policies, and practices will help expedite intelligence sharing while at the same time protecting the privacy of citizens and preserving hard-won community policing relationships.~

Prospects for Hydrogen and Fuel Cells International Energy Agency, 2005 Energy security, economic prosperity and environmental protection are challenges for all countries. They are particularly pressing in the transportation sector which still relies almost exclusively on oil. The use of hydrogen as an energy carrier and fuel cells as motive devices in transportation and energy distribution systems are possible solutions. This book provides an analysis of policy responses and hurdles and business opportunities. Information regarding the latest R&D, policy initiatives and private sector plans are assessed from the perspective of the rapidly changing global energy system in the next half century.

Lethal and Non-Lethal Fires Army University Press, Thomas G. Bradbeer, 2018-09 *Lethal and Non-Lethal Fires: Historical Case Studies of Converging Cross-Domain Fires in Large Scale Combat Operations*, provides a collection of ten historical case studies from World War I through Desert Storm. The case studies detail the use of lethal and non-lethal fires conducted by US, British, Canadian, and Israeli forces against peer or near-peer threats. The case studies span the major wars of the twentieth-century and present the doctrine the various organizations used, together with the challenges the leaders encountered with the doctrine and the operational environment, as well as the leaders' actions and decisions during the conduct of operations. Most importantly, each chapter highlights the lessons learned from those large scale combat operations, how they were applied or ignored and how they remain relevant today and in the future.

The Competitive Advantage Michael E Krivdo, Robert M Toguchi, 2019-05-23 Volume 8 of the Army University Large Scale Combat Operations series. *The Competitive Advantage: Special Operations Forces in Large Scale Combat Operations* presents twelve historical case studies of special operations forces from World War I through Operation Iraqi Freedom. This volume sheds light upon the emerging roles, missions, and unique capabilities that have forged a path for Army Special Operations Forces today. These case studies set Large Scale Combat Operations in the center and place ARSOF's role in the forefront. If a reader were to take one piece from this volume, it would be the clear understanding of the close synergy that occurs between the Conventional Force and SOF in Large Scale Combat Operations for major wars in the 20th and early 21st century. That synergy should provide a broad azimuth for military planners and practitioners to follow as the Army, SOF, and the Joint Force combine to preserve the peace, defend the Nation, and defeat any adversary.
