Type VII U-Boats Roger Chesneau,2012-01-20 The ShipCraft series provides in-depth information about building and modifying model kits of famous warship types. Lavishly illustrated, each book takes the modeller through a brief history of the subject class, highlighting differences between sister-ships and changes in their appearance over their careers. This includes paint schemes and camouflage, featuring colour profiles and highly-detailed line drawings and scale plans. The modelling section reviews the strengths and weaknesses of available kits, lists commercial accessory sets for super-detailing of the ships, and provides hints on modifying and improving the basic kit. This is followed by an extensive photographic gallery of selected high-quality models in a variety of scales, and the book concludes with a section on research references books, monographs, large-scale plans and websites. This volume is devoted to the largest class of submarines ever built, the Type VII, which formed the backbone of the German effort in the critical Battle of the Atlantic. A pre-war design, the Type VII was developed as the campaign progressed and was still in frontline service in 1945. All the major variants, as well as minor changes to equipment, are covered here. With its unparalleled level of visual information paint schemes, models, line drawings and photographs it is simply the best reference for any modelmaker setting out to build one of these famous boats.

Type VII Marek Krzyształowicz,2012-05-02 “Describ[es] the Type VII and its place in the history of warfare . . . probably the finest book on German submarines of WWII available in print.”—Firetrench First conceived in the mid-1930s, the Type VII was still in production in the closing stages of the Second World War a decade later. Subject to continuous improvement through six major variants and with around 650 completed, it was built in larger numbers than any other submarine design in history. It formed the backbone of the Kriegsmarine’s campaign against merchant shipping for the whole of the war, and in terms of tonnage sunk was by far the most successful U-boat type. This encyclopedic work combines a technical description of the type in all its variations with a history of its development and an overview of its most significant operations—especially those convoy battles that were to have a crucial impact on the evolution of the design and its equipment. A particular attraction of the book is the comprehensive visual coverage—photographs of virtually every aspect of design, construction, fittings and shipboard life; highly detailed general arrangement plans and close-up scale drawings; and, with modelmakers in mind, a stunning collection of full-color three-dimensional illustrations of every external feature and variant of the boats. There have been many books on U-boats reflecting an enduring public interest so any new offering has to be special. With its unique concentration of information and illustrative reference, Type VII is unrivalled. “A comprehensive history of the Kriegsmarine’s most potent weapon . . . includes detailed modelmakers’ plans together with over 320 photographs.”—Maritime Advisor

*The Type VII U-boat* David Westwood,2003 The Type VII U-boat was the backbone of the fighting strength of Nazi Germany's U-boats at the outbreak of the Second World War in 1939. This volume provides a full description of the class.

**Type VII U-boats** Robert Cecil Stern,1991 The Type VII U-boat was the quintessential U-boat, the one that comes to mind whenever the subject of the Battle of the Atlantic in World War Two is raised. This book describes in detail the technological war fought by and against the Type VII U-boat and is illustrated with a marvellous selection of photographs and line drawings. Interviews with U-boat veterans and access to plentiful naval records have given the author the means to provide a fascinating insight into both life aboard a cramped vessel and the practical methods used both to track and destroy the enemy and to avoid his often fatal searches. As the war turned against Germany, this led to experimentation with technical systems that were often years ahead of their time. With its appendixes on paint schemes, boats built and a profile of Donitz, this is a valuable

contribution to the study of the U-boat arm, which will be warmly welcomed by naval enthusiasts.

**The VIIC Type U-Boot** Waldemar Góralski, Mieczysław Jastrzębski, 2011-03 The type VIIC was a slightly modified version of the successful VIIB. They had basically the same engine layout and power, but were slightly larger and heavier which made them not quite as fast as the VIIB. 5 torpedo tubes (4 at the bow and one at the stern) were installed in all but the following boats; only two bow tubes (U-72, U-78, U-80, U-554 and U-555) and no stern tube (U-203, U-331, U-351, U-401, U-431 and U-651). The VIIC was the workhorse of the German U-boat force in World War Two from 1941 onwards and boats of this type were being built throughout the war. The first VIIC boat being commissioned was the U-69 in 1940. The VIIC was an effective fighting machine and was seen in almost all areas where the U-boat force operated although their range was not as great as the one of the larger IX types. The VIIC came into service as the Happy Days were almost over and it was this boat that faced the final defeat to the Allied anti-submarine campaign in late 1943 and 1944. Perhaps the most famous VIIC boat was the U-96 which is featured in the movie *Das Boot*, other noticeable boats were the U-flak boats. Many of these boats were fitted with the Schnorkel in 1944-1945. This design saw one more improvement in the type VIIC/41 boat. The larger mine-laying type VIID was a direct variant of the VIIC.

Hitler's U-boat War Clay Blair, 2000-04 The second volume in Clay Blair's history of Hitler's U-boat war, covering years 1942 to 1945. Told chronologically, it is divided into two sections: the war against Britain and her empire, and the war against the Americas. Clay Blair served in World War II in the submarines. He chronicles dramatic scenes of naval actions and makes interpretations and conclusions about all aspects of the Battle of the Atlantic.

*"An Honorable Place in American Air Power"* Frank A. Blazich (Jr.), 2020 Military historian and Civil Air Patrol (CAP) member Frank A. **The Craft of Scientific Presentations** Michael Alley, 2006-05-17 This timely and hugely practical work provides a score of examples from contemporary and historical scientific presentations to show clearly what makes an oral presentation effective. It considers presentations made to persuade an audience to adopt some course of action (such as funding a proposal) as well as presentations made to communicate information, and it considers these from four perspectives: speech, structure, visual aids, and delivery. It also discusses computer-based projections and slide shows as well as overhead projections. In particular, it looks at ways of organizing graphics and text in projected images and of using layout and design to present the information efficiently and effectively.

*U-Boat 1936-45 (Type VIIA, B, C and Type VIIC/41)* Alan Gallop, 2014-11-01 An insight into the design, construction and operation of the feared World War 2 German Type VIIC U-boat. The German Type VIIC U-boat, scourge of Allied shipping convoys during the Second

World War, was the workhorse of the German U-boat force. With some 568 Type VIIIs in use between 1940 and 1945 it was a potent fighting vessel that could hunt for long periods in the far reaches of the western and southern Atlantic. Centerpiece of the Haynes U-boat Owners' Workshop Manual is the sole surviving example of a Type VIIC U-boat, U-995, which is on display at the German Naval Memorial near Kiel in northern Germany.

*Integration of the Armed Forces, 1940-1965* Morris J. MacGregor, 2020-06-18 In the quarter century that followed American entry into World War II, the nation's armed forces moved from the reluctant inclusion of a few segregated Negroes to their routine acceptance in a racially integrated military establishment. Nor was this change confined to military installations. By the time it was over, the armed forces had redefined their traditional obligation for the welfare of their members to include a promise of equal treatment for black servicemen wherever they might be. In the name of equality of treatment and opportunity, the Department of Defense began to challenge racial injustices deeply rooted in American society. For all its sweeping implications, equality in the armed forces obviously had its pragmatic aspects. In one sense it was a practical answer to pressing political problems that had plagued several national administrations. In another, it was the services' expression of those liberalizing tendencies that were permeating American society during the era of civil rights activism. But to a considerable extent the policy of racial equality that evolved in this quarter century was also a response to the need for military efficiency. So easy did it become to demonstrate the connection between inefficiency and discrimination that, even when other reasons existed, military efficiency was the one most often evoked by defense officials to justify a change in racial policy. Morris J. MacGregor, Jr., received the A.B. and M.A. degrees in history from the Catholic University of America. He continued his graduate studies at the Johns Hopkins University and the University of Paris on a Fulbright grant. Before joining the staff of the U.S. Army Center of Military History in 1968 he served for ten years in the Historical Division of the Joint Chiefs of Staff.

Command Of The Air General Giulio Douhet, 2014-08-15 In the pantheon of air power spokesmen, Giulio Douhet holds center stage. His writings, more often cited than perhaps actually read, appear as excerpts and aphorisms in the writings of numerous other air power spokesmen, advocates-and critics. Though a highly controversial figure, the very controversy that surrounds him offers to us a testimonial of the value and depth of his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point where, today, it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest. In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh "Boom" Trenchard of Great Britain and William "Billy" Mitchell of the United States, is justly recognized as one of the three great spokesmen of the early air power era. This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book, published in 1921. Readers may well find much that they disagree with in this book, but also much that is of enduring value. The vital necessity of Douhet's central vision-that command of the air is all important in modern warfare-has been proven throughout the history of wars in this century, from the fighting over the Somme to the air war over Kuwait and Iraq.

*Combat Squadrons of the Air Force; World War II.* Maurer Maurer, 1969 This collection of squadron histories has been prepared by the USAF Historical Division to complement the Division's book, *Air Force Combat Units of World War II*. The 1,226 units covered by this volume are the combat (tactical) squadrons that were active between 7 December 1941

and 2 September 1945. Each squadron is traced from its beginning through 5 March 1963, the fiftieth anniversary of the organization of the 1st Aero (later Bombardment) Squadron, the first Army unit to be equipped with aircraft for tactical operations. For each squadron there is a statement of the official lineage and data on the unit's assignments, stations, aircraft and missiles, operations, service streamers, campaign participation, decorations, and emblem.
